Morninig report

for 08.06.2018 at 08:00am

1. LOCATION in the mission area (since last report)

According to the Italian Authorities, on the ongoing day exceptional rainfall has been concentrated in North-Eastern Italian Regions causing significant increasing in water levels and river discharges.

Pre-alarm phase has been declared for several dams in the most affected area.

New flood alerts have been issued by national/regional hydromet centres due to the persistence of the severe weather in North-Eastern Italy.

The main critical situations in the next hours are expected to affect in particular the provinces of Treviso and Venezia in Veneto Region and Pordenone and Udine in Friuli Venezia Giulia Region.

The levels of Tagliamento and Livenza rivers, as well as all the tributaries, are close to the third and last threshold and several floods are expected in the next hours.

Several households are flooded, thousands of people have been evacuated with the support of rescue teams dislocated all over the affected area.

An undefined number of missing persons has been communicated from the Italian Government, rescue operations have been conducted all day long by modules in order to save lifes.
